BRACHIAL PLEXUS INJURIES

The brachial plexus is a network of nerves that control the muscles of the shoulder, arm, elbow, wrist, hand and fingers. Injury to the brachial plexus can result in full to partial paralysis of one or both arms. Stretching, tearing and other trauma can cause this type of injury. It can occur during the birthing process or due to automobile, motorcycle, or boating accidents; gunshot wounds; sports injuries; specific medical treatments/procedures/surgeries; or due to viral causes. For more information go to www.ubpn.org or call United Brachial Plexus Network, Inc. at 1-866-877-7004.
